# Make a Hexaflexagon!

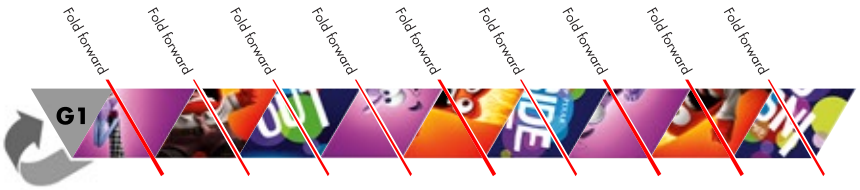
**A Hexaflexagon is a 'magic' mathematical shape that you can keep flipping inside out to reveal hidden pictures. Cut out the shapes and have a go - can you find all 6 images?**

## Step 1

**Cut out the small template, or cut out and join the 3 pieces to make the big one. Then, fold it down the middle along the red line**

## Step 2

**With 'G1' facing up, fold forward on each of these red lines in turn**



## Step 3

**You should end up with shape that looks like this...**

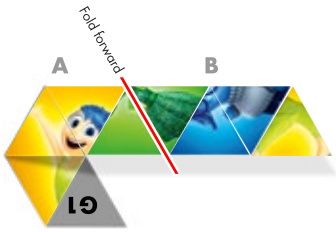
## Step 4

**With the 'back' facing you, fold along this line, folding side 'A' behind side 'B'**

**So it looks like this...**

## Step 5

**Fold along this line, folding side 'B' over side 'A'**



**So it looks like this...**

## Step 6

**Bring 'G1' out from behind so it sits in front, then fold and stick 'G2' on to 'G1'**

## How to use it
